FACE: 2024

Mona Lisa's Face

'Window of the soul' - Face has moveable skin for facial expression

> Mona Lisa's Hands

FACE IS UNIQUE - skin of face is <u>thin and</u> <u>moveable</u>

Facial Paralysis -Bell's Palsy - face disfigures

OVERVIEW OF FACIAL MUSCLES

FACIAL MUSCLES HAVE UNIQUE PROPERTIES

A. Facial muscles are embedded in superficial fascia - take origin from underlying bones (mostly); insert onto skin

FACIAL TRANSPLANT

Note: In severe damage to face, facial transplants are required because muscles of facial expression insert onto skin rather than tendons (therefore, cannot use grafts of other body muscles).

OVERVIEW OF FACIAL MUSCLES

FACIAL NERVE (Cranial Nerve VII) B. Neural control of Facial muscles - Facial muscles are under <u>both</u> <u>voluntary and emotional</u> (involuntary) control.

C. Detecting action of Facial muscles muscles of face have no (or very few) muscle spindles; muscle contractions are thought to be detected by stretching of skin.

OVERVIEW OF FACIAL MUSCLES: FACIAL PARALYSIS

FACIAL PARALYSIS -BELL'S PALSY -CN VII

'drooping' eyebrow

'drooping' upper lip

BELL'S PALSY- Lower Motor Neuron (Alpha motor neuron) disorder of Facial Nerve (CN VII): associated with viral infection (herpes simplex); Symptoms unilateral: sudden onset paralysis of <u>all facial muscles</u> on one side; SYMPTOMS: drooling; inability to close eye; loss of taste to anterior tongue; pain in or behind ear; hyperacousia

UPPER MOTOR NEURONS DISORDERS OF VII - 'sparing' of upper face - After cortical strokes, often only muscle of lower face are paralyzed on one side, muscles of upper face are not paralyzed (ex. brow, orbicularis oculi); cortical projections are bilateral to upper face.

CONTROL OF MUSCLES OF FACIAL EXPRESSION

FACIAL MOTOR NUCLEUS – ALPHA MOTOR NEURONS TO FACIAL MUSCLES IN BRAINSTEM

LOWER MOTOR NEURON LESION - ex. BELL'S PALSY -

AFFECTS ALL MUSCLES OF FACIAL EXPRESSION UPPER MOTOR NEURON LESION ex. CORTICAL STROKE (vascular occlusion)

AFFECTS ONLY MUSCLES OF LOWER FACE (<u>'SPARING OF</u> <u>UPPER FACE</u>')

UPPER FACE CONTROL IS BILATERAL (both sides of Cortex) LOWER FACE CONTROL IS UNILATERAL (ONLY CONTRALATERAL CORTEX)

OVERVIEW OF BLOOD SUPPLY TO HEAD

1) COMMON CAROTID ARTERY DIVIDES TO EXTERNAL AND INTERNAL CAROTID ARTERIES

2) INTERNAL CAROTID ARTERY AND VERTEBRAL ARTERY SUPPLY BRAIN

3) EXTERNAL CAROTID ARTERY SUPPLIES FACE AND HEAD Branches:

- **1. SUPERIOR THYROID**
- 2. ASCENDING PHARYNGEAL
- 3. LINGUAL
- 4. FACIAL
- **5. OCCIPITAL**
- 6. POSTERIOR AURICULAR
- 7. SUPERFICIAL TEMPORAL
- 8. MAXILLARY

Mnemonic - 'Some Anatomists Like Freaking Out Poor Medical Students'

VERTEBRAL ARTERY

PALPATE CAROTID BIFURCATION AT UPPER BORDER OF THYROID CARTILAGE

*

TAKE PULSE OF CAROTID ARTERY AT UPPER BORDER OF THYROID CARTILAGE

thyroid cartilage

VERTEBRAL LEVEL C4

II. ARTERIAL SUPPLY TO FACE - mainly from Facial and Superficial Temporal Arteries

a) Facial A.

- extremely winding and tortuous (skin moves)
- arises from ant. side of **Ext Carotid.**
- courses first medial to mandible then anterior
- site of Facial Pulse

Branches: 1) Sup. and Inf. Labial Arteries – upper and lower lips Note: Anastomose with opposite side (cut lip can bleed profusely) 2) Angular Artery - nose, angle (corner) of eye

ARTERIAL SUPPLY TO FACE

PULSE HERE
b) Superficial Temporal A.
one of terminal branches
arises ant. to Ext.
auditory meatus (opening to ear),
deep to parotid

TAKE

- many branches to scalp Small branches to face: <u>note: CONFUSING AND</u> <u>INCONSEQUENTIAL - Transverse</u> <u>Facial artery</u>

Note: * **-This** was a picky question on past National Boards

TRANS. FACIAL. A. *

OVERVIEW OF BLOOD SUPPLY TO HEAD -Internal Carotid supplies brain, also branches to eye, face

Vertebral A. Courses Through Foramina Transversaria / C1-C6; supplies brain stem, spinal cord

Int. Carotid A. Ascends without Branching into Skull (via Carotid Canal)

INTERNAL CAROTID ARTERY

OPHTHALMIC ARTERY Note: Carotid = Karatikos in Greek = stupor; Named by Galen; Compression causes black out

> Enters skull without Branching

Branches to: A. Brain B. <u>Ophthalmic Artery-</u> Major blood supply To eye (orbit)

Note: Branches of Ophthalmic artery leave orbit to supply Face, Forehead, Nasal cavity

2. BRANCHES OF INTERNAL CAROTID TO FACE -From Ophthalmic Artery

2) <u>Supratrochlear</u> <u>artery</u>on medial side of Supraorbital a. (above trochlea)

1) <u>Supraorbital artery</u> – to scalp above orbit

Note: Orbit (= eye socket) is major route for nerves and blood vessels to reach face and nasal cavity

III. VENOUS DRAINAGE - branches follow arteries

- NOTE: <u>Veins of Face have no (OR FEW AND</u> <u>VARIABLE) valves</u>; drain to neck and into skull; Extensive anastomoses between branches of Facial AND Ophthalmic Veins

*

SPREAD OF INFECTION FROM FACE TO BRAIN

 Prolonged infections spread via veins (pressure low, no valves)
 Pass through orbit to Cavernous Sinus - <u>CAVERNOUS SINUS</u> <u>THROMBOSIS</u>; infections lateral to nose particularly dangerous
 Clinical sign: 'Blurred' vision (actually DIPLOPIA) (cranial nerves to eye muscles pass through Cavernous sinus)

LEARN NAMES AND NUMBERS OF CRANIAL NERVES

I. OLFACTORY - sense of smell II. OPTIC - vision **III. OCULOMOTOR - eye** movement **IV. TROCHLEAR - eye movement** V. TRIGEMINAL - touch, general sensation to skin, oral cavity, nasal cavity + more **VI. ABDUCENS - eye movement** VII. FACIAL - muscles of facial expression + lots more VIII. VESTIBULO-COCHLEAR hearing and balance **IX. GLOSSOPHARYNGEAL** sensory to pharynx +more X. VAGUS - larynx, pharynx + rest of body **XI. ACCESSORY** sternocleidomastoid, trapezius XII. HYPOGLOSSAL - muscles of tongue

IV. SENSORY INNERVATION - TRIGEMINAL NERVE -TO SKIN OF HEAD – 3 DIVISIONS

SENSORY SUPPLY - BRANCHES OF TRIGEMINAL NERVE TO FACE

V2 – MAXILLARY to skin of cheek below orbit -Zygomaticotemporal Zygomaticofacial Infraorbital

V3- MANDIBULAR - B to skin of jaw and face below angle of mouth -Auriculotemporal Buccal Mental

NOTE: These are SOME branches of V (to face), not ALL branches of V

Μ

V1 – OPHTHALMIC to skin above orbit -Lacrimal Supraorbital Supratrochlear Infratrochlear External Nasal Nerve

FIGURE 21-13 Examination of the trigeminal cranial nerve

CLINICAL TEST OF V: SUPRAORBITAL N.

REFERENCE HANDOUT: TRIGEMINAL NERVE BRANCHES (NOT INCLUDING HITCHHIKING PATHWAYS OF MI, IX)

ALL BRANCHES OF TRIGEMINAL NERVE ARE LISTED IN HANDOUT

DO NOT MEMORIZE NOW BUT USE AS REFERENCE – SEE LATER V1 Ophthalmic - Somatic Sensory only (GSA) - through Superior Orbital Fissure to Orbit

Nerve	Branches	Innervates
1. Frontal Nerve	a. Supraorbital Nerve	Scalp forehead, upper eyeld
	b. Supratrochlear Nerve	Scalp forehead, upper eyelid
2. Lacrimal Nerve		Upper eyelid
3. Nasociliary Nerve	a. Long Cliary Nerve	Comea of eye
	b, Ant. and Post. Ethmoidal Nerves	Nasal cavity, ethmoid sinus, tip of nose
	c. Infratrochlear Nerve	Upper eyelid, nose

V2 Maxillary - Somatic Sensory (GSA) only - through Foramen Rotundum to Pterygopalatine Fossa

Nerve	Branches	Innervates
 Meningeal branches 		Dura of mid. Cranal tossa
2. Ganglionic branches	a. Greater Palatine Nerve	Hard Palate
	b. Lesser Palatine Nerve	Soft Palate
	c. Nasopalatine Nerve	Nasal Cavity, Hard Palate
	d. Nasal branches	Nasal Cavity
 Post. Sup. Aveolar Nerve 		Maxillary teeth
Infraorbital nerve		Lower eyelid, nose, upper lip
	a, Ant. Sup. Aveolar Nerve	Maxillary teeth
Constant and a second second	b. Mid. Sup. Alveolar Nerve	Maxillary teeth
 ∠ygornatic nerve 	a. Zygomaticofacial Nerve	Skin of cheek
	b. Zygomaticotemporal Nerve	Skin of temporal region

V3 Mandibular - Somatic Sensory (GSA) and <u>Branchiomotor</u> (SVE) - Foramen Ovale to Infratemporal Fossa

Nerve	Branches	Innervates
1. Nervous spinosus		Sensory to Dura of mid Cranial tossa
2. Motor branches		Motorto Med. Herygoid, Iens. Tympani, Tensor Palati
3. Anterior division	a. Nerve to Lateral Herygoid	Motorto Lateral Herygoid
	b. Masseteric Nerve	Motorto Masseter
	c. Deep Temporal Nerve	Motorto Temporalis
	d. Buccal Nerve	Sensoryto Cheek
4. Postenor Division	a. Aunculotemporal Nerve	Sensory to external auditory meatus, tympanic membrane, TMU, lateral scalp
	b. Ungual Nerve	Sensory (touch) ant. 2/3 tongue
	c. Interior Alveolar Nerve	Sensory to Mandbularteeth
	i. Nerve to Mylohyoid ii. Mental Nerve	Motorto Mylohyoid, ant. Digastric Sensoryto Chin, Lowerlip

V. MUSCLES OF FACIAL EXPRESSION

- move skin of face, close eyes, open/close mouth
 convey emotions by gestures (ex. sneering, contempt) - most origin – bones; insert - skin
- many named for action in Latin/Greek
- <u>movements elicited in test for</u> Facial Nerve function (CN VII)
 - 1. <u>Orbicularis</u> <u>Oculi</u> - close eye

- Palpebral part in eyelid Close eyelids
- Orbital part on face Buries eyelids, Ex. sandstorm

PARALYSIS OF ORBICULARIS OCULI

UNABLE TO CLOSE EYE DUE TO PARALYSIS OF ORBICULARIS OCULI MUSCLE

NOTE: 1) <u>CLOSE</u> <u>EYELIDS</u> = CRANIAL NERVE VII (FACIAL N.) 2) <u>OPEN EYELIDS</u> - CRANIAL NERVE III (OCULOMOTOR) + SYMPATHETICS

CLINICAL ** **FACIAL PARALYSIS** (as in **Bell's Palsy) can paralyze ORBICULARIS OCULI MUSCLE** - patient is unable to close eye - can damage cornea of eye - in newborns, can sew eyelid shut to prevent corneal <u>damage</u>

2. <u>Orbicularis Oris</u> - Surrounds/closes mouth

Procerus

Orbicul

Leva

Tarsu

3. MUSCLES OF NOSE

a. <u>Compressor</u> <u>nares</u> - lateral to bridge of nose compresses nasal cart.

b. <u>Dilator nares</u> lateral to nostrils
dilates

c. <u>Procerus</u> wrinkles skin of nose

4. MUSCLES OF UPPER LIPa) <u>Levator Labii Superioris</u> lifts upper lip b) Zygomaticus major and minor - raise and pull upper lip laterally

5. MUSCLES AT ANGLE OF MOUTH

a) <u>Levator Anguli Oris</u> -Raise corner of mouth

b) <u>Risorius</u> - smiling

c) Depressor Anguli Oris - tragedy

PARALYSIS OF MUSCLES OF UPPER LIP PRODUCES DROOPING OF ANGLE OF MOUTH, LOSS OF NASO-LABIAL FOLD

6. MUSCLES OF LOWER LIP AND CHIN-

a) <u>Depressor Labii</u> <u>Inferioris</u> depresses low lip b) <u>Mentalis</u> wrinkles skin of chin

7. <u>BUCCINATOR</u> – Latin for trumpet player
- compresses mouth & keeps food between teeth when chewing

PARALYSIS OF BUCCINATOR MUSCLE

BUCCINATOR FORMS WALL OF MOUTH - PARALYZE UNABLE TO HOLD FOOD BETWEEN TEETH CLINICAL **

FACIAL PARALYSIS can paralyze BUCCINATOR

 patient is unable to hold food between teeth

BOARD QUESTION

- DIFFICULTY IN CHEWING FOOD

8. <u>FRONTALIS</u> - muscle in scalp attached to Epicranial Aponeurosis; <u>raises eyebrows (used</u> in clinical test of Facial nerve)

9. <u>PLATYSMA</u> - extends from mandible to fascia over Pectoralis Major; tenses, moves skin of neck

PRACTICE USING FACIAL MUSCLES SELECTIVELY IN FRONT OF MIRROR

Orbicularis Oculi

Orbital Part

Nasalis

7-15B MUSCLES OF EXPRESSION IN ACTION

Mentalis

Nasalis

Grading Policy -Depressor Anguli Oris

Sneering – **Procerus**

Procerus

Contempt – **Dilator Naris**

Depressor Anguli Oris

CLINICAL TEST FOR FACIAL NERVE FUNCTION

WRINKLE FOREHEAD BY RAISING EYEBROWS: FRONTALIS

PURSE LIPS: ORBICULARIS ORIS

SMILE: RISORIUS

SHOW TEETH: LEVATOR LABII SUPERIORIS, ZYGOMATICUS MAJOR, ETC.

DR. PAUL FERGUSON: CRANIAL NERVE EXAM

- How to test:
 - First look for asymmetry before moving on to a laundry list of components:
 - 1. Squint eyes shut against resistance
 - 2. Raise eyebrows / wrinkle forehead
 - 3. Puff out cheeks
 - 4. Smile showing teeth
 - 5. Frown
 - 6. Purse lips

DOWNLOAD FROM ZILLANATOMY.COM: FACIAL MUSCLES.MP4

VI. MOTOR INNERVATION TO MUSCLES OF FACIAL EXPRESSION - FACIAL NERVE (CRANIAL NERVE VII)

Note: Buccal Br. VII = Motor; Buccal Br. V = Sensory

1. Nasal Placodes (Thickenings) form on side of FrontoNasal process

DEVELOPMENT OF FACE

2. Medial and Lateral Nasal Processes - form at margins of nasal placodes

3. Medial nasal process and Maxillary Process - fuse to form upper lip

eye fusion eye fusion eye fusion Lateral nasal Medial nasal process process Medial nasal process Process

Terminology: process = prominence

Weeks 10-12

LIP

philtron from Greek to love, to kiss

CLEFT LIP = CHEILOSCHISIS

BOARD QUESTION

<u>failure of fusion of</u>
 <u>Medial Nasal Process</u>
 <u>and Maxillary process</u>

- 1/1000 Births, can be unilateral or bilateral
- At philtrum of lip

CLEFT LIP (cheiloschisis) CAN OCCUR IN COMBINATION WITH CLEFT PALATE (palatoschisis)

Medial Nasal

Maxillary

Gk. Cheilos, Lip; Pronounce -KAI-LOS'-KESIS

5. DEVELOPMENT OF NASOLACRIMAL DUCT

NASOLACRIMAL DUCT

– connects anterior
eye to nasal cavity

- Develops as solid cord from medial angle of eye to nasal cavity

becomes canalized.

Obstructed Duct - failure of duct to canalize; opened surgically for tears to drain to nasal cavity

SUMMARY: SEE CHART OF CLINICAL EMBRYOLOGY OF HEAD AND NECK

CLINICAL EMBRYOLOGY OF HEAD AND NECK

Clinical Condition	Normal development	Abnormal	Signs/ Symptoms	Treatment
Cleft Lip (cheiloschisis)	Fusion of medial nasal and maxillary processes forms upper lip	Failure of fusion of medial nasal and maxillary processes	Cleft at philtrum of upper lip	Surgical repair
Malformation of nasolacrimal duct (dacryostenosis)	Duct forms as cord between maxillary and frontonasal processes; extends from lacrimal sac (at medial canthus of eye) to nasal cavity (inferior meatus)	Cord fails to canalize	Continuous flow of tears over lower lid onto face	Surgical repair
First Arch (Treacher Collins) Syndrome	First brachial arch forms skeletal elements: 1) malleus, incus 2) contributes to mandible (Meckel's cartilage)	Neural crest cells do not migrate into Arch 1	1) Mandibular hypoplasia 2) Conductive hearing loss 4) Facial malformation	Some surgical repair
Thyroglossal duct cysts	Thyroid forms as evagination at foramen cecum of tongue; tissue migrates ant. to Hyoid bone in midline of neck to location below Cricoid cartilage	Glandular tissue or cysts develop anywhere along path of migration	Mass in midline of neck	Surgical removal (remove tract to tongue)
Abnormal location/ Accidental Removal of parathyroid glands	Normally posterior to thyroid gland or embedded in it; develop from branchial pouches 3 and 4 Inferior parathyroid - pouch 3 Superior parathyroid - pouch 4	Can be located within thyroid gland or ectopic	Normally no symptoms; calcium imbalance If accidentally remove (Treat calcium imbalance pharmaco- logically, etc.

Orbicularis oculi (orbital part) Zygomaticus major Levator Labi Superioris Depressor Anguli Oris
